

## **Epic Training**

Students who will have clinical experiences at Miami Valley or Good Samaritan Hospitals will be trained to use their computerized charting system (EPIC).

The training is in 2 parts – online at home and in clinical the first week of the class. A letter or email will be sent prior to the start of your clinical experience so that introductory modules in Healthstream can be completed before your scheduled EPIC training with your clinical group.

Your clinical instructor will schedule the training session and you will be notified of the specific date, time and room location. Once you have completed EPIC training, you may be required to participate in EPIC update training sessions as scheduled by your clinical faculty.

Even if you are an employee of the above mentioned institutions you will still be required to take EPIC training as a nursing student in order to have access to the student/RN level screens and information. A new password will be issued due to the change in your status as a student nurse.
