

PROGRAM OUTCOMES

An entry-level graduate with an Associate of Applied Science Degree in Nursing from Sinclair Community College will be able to:

1. Acknowledge the influence of diversity on patients, families, and members of the health care team.
2. Demonstrate caring behaviors in providing patient-centered nursing care.
3. Apply best current evidence and critical thinking to the steps of the nursing process to make clinical judgments related to nursing care.
4. Implement nursing care that promotes balance in human responses to actual or potential health problems.
5. Demonstrate safe performance of required nursing skills within cognitive, affective and psychomotor domains.
6. Apply principles of effective and therapeutic communication with patients, families, and members of the interdisciplinary health care team.
7. Implement teaching which is effective in promoting health or preventing illness.
8. Plan and deliver nursing care to a group of patients in collaboration with other registered nurses and the interdisciplinary team.
9. Assume responsibility and accountability for meeting ethical, legal and quality standards of the profession.
10. Demonstrate use of technology to access and manage information for safe and quality care.
